

Project Executable Files

Date	05 July 2026
Team ID	SWTID-2026-7290
Project Name	Smart Lender
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://glowworm-chive-kinetic.ngrok-free.dev/ http://127.0.0.1:5000/ https://07b8526e84d87a9549.gradio.live
Login Credentials (Demo)	Not required
Platform / Hosting Provider	Flask , gradio
Repository Link	https://github.com/tejaswinimaddireddy678-web/AI-ML-and-GEN-AI-Track-Project-Template
Demo Video Link	https://drive.google.com/drive/u/0/folders/1AGDAJTeS8LxF0V6VW1MP_7yhBASCVNJZ

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Prerequisites

- Python 3.10 or later
- pip (Python Package Manager)
- Git (optional)

Installation Steps

1. Download or clone the project:

```
git clone https://github.com/yourusername/Smart-Lender.git
```

2. Navigate to the project directory:

```
cd Smart-Lender
```

3. Create a virtual environment:

```
python -m venv venv
```

4. Activate the virtual environment:

Windows

```
venv\Scripts\activate
```

Linux/macOS

```
source venv/bin/activate
```

5. Install the required dependencies:

```
pip install -r requirements.txt
```

6. Start the Flask application:

```
python app.py
```

7. Open a web browser and visit:

```
http://127.0.0.1:5000
```

8. Click **Predict Loan**, enter the applicant details, and submit the form.
9. View the prediction result (**Loan Approved** or **Loan Rejected**)

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality of the training dataset.	Retrain the model with updated and larger datasets.
2	The application predicts loan approval but does not provide reasons for the prediction.	Explainable AI (XAI) can be integrated in future versions.
3	The current version uses a local model and does not integrate with banking databases or credit score APIs.	Future versions can connect to real-time banking systems and external APIs.
